

About Us

Situated in the North Yorkshire Moors, the springs at Acre House Farm have been the source of fresh water for the village of Kilburn since time immemorial.

Founded in 1997, Chilburne Spring has gradually expanded its retail delivery area to encompass virtually the whole of the East side of England from Peterborough to Newcastle.

Pure Natural Spring Water

The limestone geology, surrounding the Kilburn area, acts as a natural filter that both purifies the water and gives Chilburne Spring its unique taste.

Typical Analysis (mg/l)

Calcium	92.0
Magnesium	2.5
Potassium	0.8
Sodium	17.0
Bicarbonate	189.0
Chloride	46.0
Sulphate	68.0
Nitrate	16.0
Phosphate	7.3
Residue @ 180°C	360.0

The water is high in natural minerals, having permeated through the rock formations peculiar to the locality and is possibly the most pure in Europe.

Our bottles are filled without undergoing any processing or additives that can be associated with other waters, thus

maintaining and preserving all the minerals and nutrients not found in processed water.

As Chilburne Spring water is bottled to demand, it will have been bottled for no longer than 24 hours before delivery, ensuring a fresh supply of water to all our customers.

Service

Whether for work or home we will find a water dispenser to meet your needs. Our standard cooler range includes desktop and floor standing with a choice of hot & cold and cold and room temperature.

Once chosen, our service engineers will install your water cooler using a standard 13amp power supply, with no plumbing required.

After this most of our customers are visited weekly, without having to contact us, although other arrangements are available. For more details of our delivery schedules please contact us.

Once every 13 weeks our service engineers will visit to carry out a recommended service and sanitisation of the cooler, which involves a thorough internal sanitisation of the cooler.
